

Target Account Map

Prepared for SixSense · ~30 accounts, tiered by the paths between them · built from public signals (production starts, expansions, ownership structures, hiring) · 30 Aug 2026

How to read this: the names are the easy part — the tiers follow the doors each account opens. Tier 1 carries named people because India's plants are new enough that their yield and quality teams exist in nobody's CRM yet. Every person below was individually verified on LinkedIn, 29–30 Aug 2026.

Tier 1 — India, live now

Four plants entered production in 2026. Inspection workflows are being written this quarter — whoever gets in first becomes the habit.

Tata Electronics / TSAT

Vemagal (Karnataka) shipping now · Jagiroad (Assam) ramping toward 48M chips/day by end-2026 · Dholera 300mm fab (PSMC technology) targets first wafers late 2026

Why now: the Vemagal line is transferring into Jagiroad this quarter — hundreds of tools moving by September. Standards set now hold for a decade. Their own leadership describes the OSAT as AI-enabled.

Tim McIntosh	VP, Head of Operations & Mfg Excellence, TSAT	Runs both Vemagal and Jagiroad; the operations owner
Ashish Mishra	Head, HVM Manufacturing (OSAT)	Building Jagiroad; calls it “AI enabled” in his own bio — the door is pre-opened
Kirubalan Natarajan	GM, Quality Assurance	Ex-UTAC quality leadership — knows OSAT quality regimes from Singapore
Jagadish Sunderraj	Sr Manager — NPI, Test & Quality	Owns yield/RR triggers and CLCA loops day to day

CG Semi (CG Power + Renesas + Stars Microelectronics JV)

Commercial at G1 since 4 Jul 2026 · G2 under construction, toward 15M chips/day · first shipments went to Kuala Lumpur

Why now — and the path: the floor is staffed with Malaysia OSAT veterans, the exact buyer profile SixSense already sells to. And this account is the Renesas door: win Sanand and there is a reason to be in front of Renesas in Japan.

Mark Gerald Pinlac	G1 Plant Operations Head	Publicly credited by Renesas leadership for the production launch
LW Yong	VP Operations (joined Jun 2026)	40 years in semis; ex-Amkor; has started multiple greenfield sites
Gene de Roca	QA Test Manager	16 years of OSAT quality management in Singapore
Ricardo Martos	Lead Test Equipment Engineer	14 years at Renesas KL before joining — the Renesas path in human form

Kaynes Semicon

Producing since 31 Mar 2026 · ramping 1.5M toward 6.3M units/day · headcount up ~870% year on year

Why now: hiring at that rate means inspection is scaling headcount-first — the exact cost AI-ADC removes. Their own leadership is publishing on quality systems and the smart-factory “digital backbone.”

Paul Ilanghovan T.	Head of Operations, Sanand	30+ years in semiconductor packaging; set up plants from zero before
Phaneendra T.S.	Sr VP, Test Engineering	Test-side owner as volume ramps
Anantha Murthy VR	Head — QMS & System Design	Fronts their “quality as the foundation” positioning
Gopal Rathore	VP — IT	Fronts the digital-backbone / smart-factory push — the systems budget

Micron — Sanand ATMP

Commercial since 28 Feb 2026 · tens of millions of units in 2026, hundreds of millions planned for 2027

Why now — and the path: Sanand is being staffed by transfers from Micron Muar and Singapore, so site decisions mirror the mature-site playbook — and Micron's new Singapore HBM advanced-packaging fab starts up in 2026. Enter at the greenfield edge of a global account.

Malini Chokkanathan	Site Quality Director	Site-level quality owner since the 2024 build-out
Jitender Pratap Singh	Director, Operations Management	30 years of ATMP/OSAT plant management
Manish Chopra	Quality Engineering Manager	Leading quality engineering for the greenfield project since 2023
Mdhakim Abdullah	A&T Equipment Engineering Manager	Moved from Micron Muar in Jul 2026 — the Malaysia playbook arriving in person

Seed now, harvest at tool-in: HCL–Foxconn (Jewar — display-driver ATMP, under construction) · SiCSem (Odisha — SiC fab + ATMP, early build) · Tata Dholera (300mm, first wafers late 2026).

Tier 2 — Paths from wins SixSense already holds

Five moves where an existing proof point shortens the sales cycle.

UMC (Taiwan)	Wavetek is UMC's subsidiary — the proof deployed there walks straight up into the parent's specialty fabs.
Renesas (Japan / Malaysia)	Via the CG Semi JV. CG Semi already ships to KL, and its equipment staff are Renesas KL alumni.
PSMC (Taiwan)	Technology partner to Tata Dholera — one relationship spans Taiwan and India's first 300mm fab.
Tong Hsing (Taiwan)	Live on defect classification — the expansion is lot disposition and predictive inspection across lines.
Micron network	Sanand plus the new Singapore HBM fab: two greenfield edges into one global account.

Tier 3 — Expansion lookalikes, each with a live trigger

Companies that look like the customers SixSense already serves, caught mid-expansion.

ASE	TW / MY / global	Six plants breaking ground in 2026 — its biggest construction year; ~3,000 technical hires planned
Amkor	VN / MY / US	\$2.5–3B capex in 2026; Bac Ninh is its largest advanced-packaging site
X-FAB	Sarawak, MY	\$600M cleanroom opened Sep 2025; 30k to 40k wafers/month; automotive zero-escape regime
VIS / VSMC	Singapore	Greenfield 300mm JV with NXP — no legacy systems, on SixSense's home turf
Powertech (PTI)	TW / MY	Memory and HBM packaging; Malaysia site planned
ChipMOS	Taiwan	Display-driver and memory packaging; AOI-heavy lines
Hana Micron	Vietnam	Bac Ninh and Bac Giang expansions running
Inari Amertron	Penang, MY	RF and optoelectronics (Broadcom chain) — RF is proven SixSense ground
Texas Instruments	Melaka, MY	Second assembly/test factory opened Nov 2025 — 900k sq ft
Infineon — Kulim	Malaysia	Largest 200mm SiC power fab ramping; expansion within an existing relationship
STMicroelectronics	SG / MY	Singapore fab plus Muar backend; automotive-heavy
onsemi	PH / VN / CZ	SiC push plus a broad backend network
Intel Products Vietnam	Ho Chi Minh City	Intel's largest assembly-and-test site globally
Coherent	Dong Nai, VN	New SiC / optoelectronics plant opened Jul 2025
WIN Semiconductors	Taiwan	World's largest GaAs foundry — compound ground, like Wavetek and DenseLight
CHIPX	Malaysia	New 8-inch GaN/SiC fab planned
UTAC / Carsem / Unisem	SG / MY	Mid-tier OSATs riding friend-shoring volume
Tower Semiconductor	Israel	Specialty foundry in a market SixSense already operates in
SkyWater / Polar	US	Specialty fabs matching the stated US expansion push

Method — signals tracked: production starts, capacity expansion, JV and ownership structures, leadership hires, operator hiring surges, smart-factory announcements. All public sources; account facts checked 29–30 Aug 2026; people verified individually on LinkedIn. Corrections welcome — you will know faster than I would which of these are already yours, and that conversation is half the point of sharing it.
